

## GIANT TRAINING (January 2025)

The GIANT Sustainment team is pleased to announce training classes the week of 13 January 2025. Training will be offered for GIANT 5.8 virtually using Microsoft Teams. **The GIANT software is required to be installed on your government/organization computer to attend training. To request the software please visit our website at <https://www.giantsw.com/>. There is no fee to attend the GIANT Training, however space is limited.** This class is open to government and contractor personnel, with appropriate 'need to know'.

### **Monday and Tuesday, 13-14 January 2025 (0800 to 1600 MST): Analytical Training**

This class focuses on engineering and analysis applications of GIANT. The training covers the process of creating scenarios, modifying user equipment, space segment, and GPS Jammer definitions. This is a two-day training session with hands on exercises led by senior analysts and engineers from the GIANT program.

### **Wednesday, 15 January 2025 (0800 to 1600 MST): Advanced Training - CRPA Antennas and Receiver Variations**

This course introduces The Aerospace Corporation's Adaptive Nulling Effects for Scenarios (ANEFS) model and its use within GIANT. The students will use this information to review different CRPA antennas and evaluate their performance in varying threat environments. Students will also explore receiver modifications needed to support M-code and On-orbit modeling. This is a one-day training session, with extensive hands-on exercises led by senior analysts and engineers from the GIANT program.

### **Thursday, 16 January 2025 (0800 to 1600 MST): Operational Training**

This course provides a basic understanding of GPS and how the GIANT simulation tool can be used for operational Mission Planning. Through the use of hands-on exercises, the student will create scenarios representative of an operational environment and look at GPS performance predictions. The student will understand how to use the GIANT Mission Planning Wizard to create a scenario, be able to run the simulation and understand the results and how they impact operational performance.

### **Friday, 17 January 2025 (0800 to 1300 MST): GIANT RPM Training**

# GIANT

GPS INTERFERENCE AND NAVIGATION TOOL

The GPS Interference and Navigation Tool Reliability Prediction Model (GIANT-RPM) is used to support the coordination of DoD requests to perform Electronic Attack (EA) type activities in frequency bands assigned to GPS as defined in the CJCSM 3212.03. The focus of this course is the use of RPM to generate the required reports for test planning coordination. The training will take a user through the process of creating transmitter sites, defining antenna and signal models, and generating RPM reports.

## How to Register:

GIANT training registration is now available through the GIANT website. Please visit the GIANT website at [www.giantsw.com](http://www.giantsw.com) to complete and submit all registration forms.

Registration for this training session will close on 23 December 2024.

Note that all requests for training must be approved by the Model manager. As your request for training is approved, you will receive an E-mail confirmation of enrollment for the requested class, which will include instructions on submitting required visit request (VAR) to Lockheed Martin with your local security office, and necessary paperwork. Additional information will be included in the confirmation E-mail (i.e. maps, places of lodging close to the training facility, point of contacts/numbers).

If you do not receive a confirmation E-Mail or response to being placed on a waitlist, please contact the GIANT sustainment team directly at [giant@linquest.com](mailto:giant@linquest.com) (937) 306.6076.

For additional information see: <http://www.giantsw.com>.

Respectfully,  
//Signed//  
Geoffrey Moshier, 2d Lt, USSF  
31st Sustainment Squadron
